Sustainability Management - Smart Use of Energy and Water for a Better Environment

24 May 2013, Friday

Synopsis

With limited resources, everyone needs to find the efficient and effective deployment of resources for better life and environment. It requires a fundamental change of mindset to achieve a sustainable development. The symposium provides a platform for policy makers from both the Government and the legislature; industry leaders, technology providers, academia and senior members of the engineering profession to share their respective perspectives and efforts made in creating a sustainable living environment for generations to come.

The main focuses are:

- A new symposium approach of advocating the application of advanced technologies to promote smart use of resources like water and solar energy, etc.
- Insights into water management, waste water management, facility management, solar technology, feasibility of solar plant, other Energy Efficiency and Conservation initiatives
- The feasibility concerns in financial management, business return and analysis, risk assessment, etc.

Language

The Symposium is to be conducted in English unless otherwise specified.

Remark:

The Organiser reserves the right to change speaker(s) and/or topic(s) without prior notice. A detailed Symposium Programme will be distributed in due course. Please check our website, www.theiet.org.hk, for the latest update.
